

Year 3 Proud Board

Week Beginning: 25th January.

Tobias – Monday English

INTRODUCTION

Crystals are a type of rock and there are 4 different types; molecular, ionic, metallic and covalent. Crystals are a special kind of solid material where the molecules fit together in a repeating pattern and forms into all sorts of shapes.

Crystals can be used to keep the time. When an electric current is sent through a quartz crystal, it vibrates at an exact frequency and can be used in watches to keep the correct time. Crystals are also thought to promote the flow of good energy and have physical and emotional benefits.

Almost all crystals are formed below the Earth's surface. They are brought to the surface through mining, earthquakes or volcanoes.

Felix – Monday History

- 3.The celt were mainly farmers.
- 4.The celts wore brightly colored clothes.
- 5.The celts made animal sacrifices to the gods.

Dakota – Tuesday English

Food

Have you ever wondered what Japanese people eat for breakfast? Well, you're about to find out! They eat plain, steamed rice, which is normally not a breakfast food for people in the U.K. Often, their favourite food is Sushi, which is raw (uncooked food) fish with rice wrapped around it. As well as that, Japanese people eat Ramen. Ramen is egg noodles in a salty broth (soup) and this is generally a late night meal in Japan.

Rafi – Wednesday English

Properties of blood

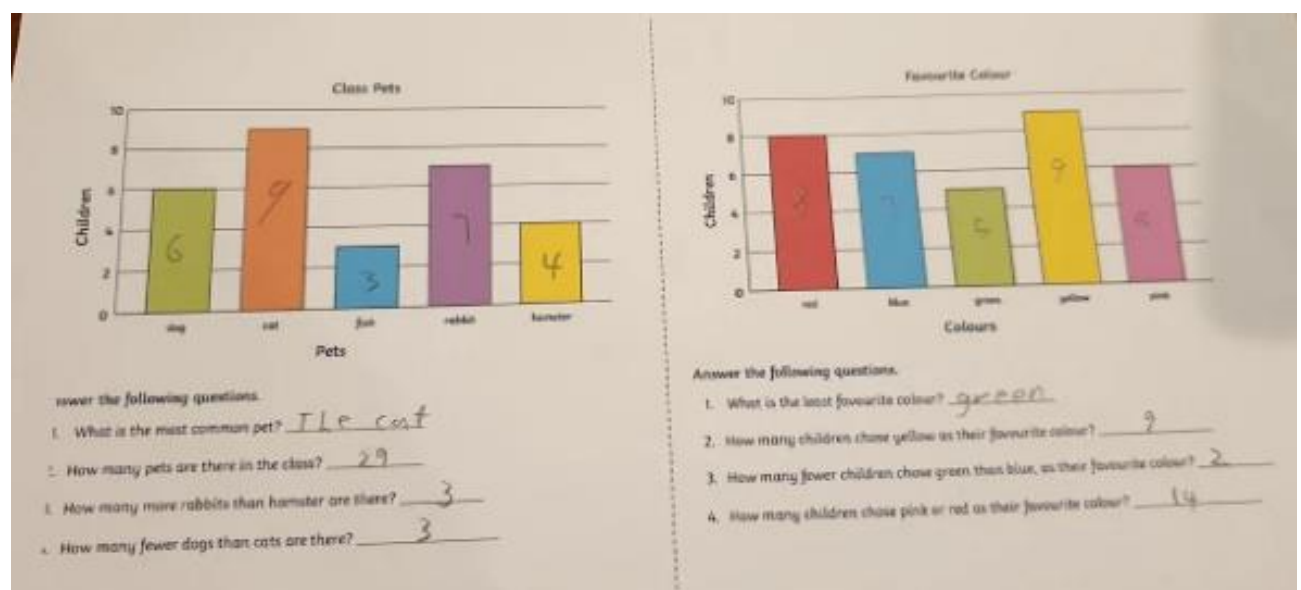

Blood is made up of red blood cells, white blood cells, platelets and plasma. The red blood cells, which carry Oxygen around the body, ~~but they~~ do not live very long. Red blood cells die after 4 months but they always ~~regenerate~~ ~~grow back new~~. White blood cells are like warriors in your body, when they see something they don't like they immediately ~~try to~~ destroy it. If that is not possible they would send messages to your brain to tell your body to heat up to make a fever. This causes the germs to get weaker and they find it harder to survive.

Whenever you have a cut the platelets turn into jelly and stop the blood coming out and plasma is a liquid that helps move nutrients around your body.

Noah – Wednesday Maths

Daniel – Thursday Maths

Aimee- Thursday RE

Maksio - Friday English

The United States of America

The United States of America (USA) is a country in a continent called North America. It is made up of fifty states and the capital city is Washington D.C., which is located in the state of Washington. It has a population of approximately 328 million and is the 3rd largest country in the world from a land mass perspective.

The Flag

The American flag is a symbol of the USA. The USA flag, also known as Old Glory, has been an important national symbol since its official birth on 13th June 1777. Let's look at what each part of the flag represents.

The 50 white stars represent the 50 states in the country. 13 stripes: the 7 red and 6 white horizontal stripes represent the original 13 colonies. Red colour represents hardiness and valor, white colour: purity and innocence and blue represents vigilance, perseverance and justice.

Did you know? 5 Apollo missions (12,14,15,16 and 17) ended with an astronaut placing a flag on the moon?.
